Forest Research Institute

The International Union of Forest Research Organizations (IUFRO) was founded in 1892 and has become the advocate of forest science on a world-wide scale. It promotes coordination of and international cooperation in research and science synthesis, and application of science in management and policy, in all areas related to forests and trees. IUFRO is a voluntary, non-profit, non-governmental scientific body open to organizations and individuals involved in forestry research and forest-related sciences.

Membership in IUFRO means that the researchers at the Forest Research Institute can enjoy a wide range of services and benefits and cooperate in a global network for forest science.
